

# CSC 456/656 Fall 2021 Practice for the Third Examination November 17, 2021

The entire practice test is 590 points. The real test will be shorter.

1. True or False. T = true, F = false, and O = open, meaning that the answer is not known science at this time.
  - (i) \_\_\_\_\_ Let  $L$  be the language over  $\{a, b, c\}$  consisting of all strings which have more  $a$ 's than  $b$ 's and more  $b$ 's than  $c$ 's. There is some PDA that accepts  $L$ .
  - (ii) \_\_\_\_\_ The language  $\{a^n b^n \mid n \geq 0\}$  is context-free.
  - (iii) \_\_\_\_\_ The language  $\{a^n b^n c^n \mid n \geq 0\}$  is context-free.
  - (iv) \_\_\_\_\_ The language  $\{a^i b^j c^k \mid j = i + k\}$  is context-free.
  - (v) \_\_\_\_\_ The intersection of any three regular languages is regular.
  - (vi) \_\_\_\_\_ The intersection of any regular language with any context-free language is context-free.
  - (vii) \_\_\_\_\_ The intersection of any two context-free languages is context-free.
  - (viii) \_\_\_\_\_ If  $L$  is a context-free language over an alphabet with just one symbol, then  $L$  is regular.
  - (ix) \_\_\_\_\_ There is a deterministic parser for any context-free grammar.
  - (x) \_\_\_\_\_ The set of strings that your high school algebra teacher would accept as legitimate expressions is a context-free language.
  - (xi) \_\_\_\_\_ Every language accepted by a non-deterministic machine is accepted by some deterministic machine.
  - (xii) \_\_\_\_\_ The problem of whether a given string is generated by a given context-free grammar is decidable.
  - (xiii) \_\_\_\_\_ If  $G$  is a context-free grammar, the question of whether  $L(G) = \emptyset$  is decidable.
  - (xiv) \_\_\_\_\_ Every language generated by an unambiguous context-free grammar is accepted by some DPDA.
  - (xv) \_\_\_\_\_ The language  $\{a^n b^n c^n d^n \mid n \geq 0\}$  is recursive.
  - (xvi) \_\_\_\_\_ The language  $\{a^n b^n c^n \mid n \geq 0\}$  is in the class  $\mathcal{P}$ -TIME.
  - (xvii) \_\_\_\_\_ There exists a polynomial time algorithm which finds the factors of any positive integer, where the input is given as a binary numeral.
  - (xviii) \_\_\_\_\_ Every undecidable problem is  $\mathcal{NP}$ -complete.
  - (xix) \_\_\_\_\_ Every problem that can be mathematically defined has an algorithmic solution.

- (xx) — The intersection of two undecidable languages is always undecidable.
- (xxi) — Every  $\mathcal{NP}$  language is decidable.
- (xxii) — The clique problem is  $\mathcal{NP}$ -complete.
- (xxiii) — The traveling salesman problem is  $\mathcal{NP}$ -hard.
- (xxiv) — The intersection of two  $\mathcal{NP}$  languages must be  $\mathcal{NP}$ .
- (xxv) — If  $L_1$  and  $L_2$  are  $\mathcal{NP}$ -complete languages and  $L_1 \cap L_2$  is not empty, then  $L_1 \cap L_2$  must be  $\mathcal{NP}$ -complete.
- (xxvi) — There exists a  $\mathcal{P}$ -TIME algorithm which finds a maximum independent set in any graph  $G$ .
- (xxvii) — There exists a  $\mathcal{P}$ -TIME algorithm which finds a maximum independent set in any acyclic graph  $G$ .
- (xxviii) —  $\mathcal{NC} = \mathcal{P}$ .
- (xxix) —  $\mathcal{P} = \mathcal{NP}$ .
- (xxx) —  $\mathcal{NP} = \mathcal{P}$ -SPACE
- (xxx i) —  $\mathcal{P}$ -SPACE = EXP-TIME
- (xxx ii) — EXP-TIME = EXP-SPACE
- (xxx iii) — EXP-TIME =  $\mathcal{P}$ -TIME.
- (xxx iv) — EXP-SPACE =  $\mathcal{P}$ -SPACE.
- (xxx v) — The traveling salesman problem (TSP) is  $\mathcal{NP}$ -complete.
- (xxx vi) — The knapsack problem is  $\mathcal{NP}$ -complete.
- (xxx vii) — The language consisting of all satisfiable Boolean expressions is  $\mathcal{NP}$ -complete.
- (xxx viii) — The Boolean Circuit Problem is in  $\mathcal{P}$ .
- (xxx ix) — The Boolean Circuit Problem is in  $\mathcal{NC}$ .
- (xl) — If  $L_1$  and  $L_2$  are undecidable languages, there must be a recursive reduction of  $L_1$  to  $L_2$ .
- (xli) — The language consisting of all strings over  $\{a, b\}$  which have more  $a$ 's than  $b$ 's is LR(1).
- (xlii) — 2-SAT is  $\mathcal{P}$ -TIME.
- (xliii) — 3-SAT is  $\mathcal{P}$ -TIME.
- (xliv) — Primality is  $\mathcal{P}$ -TIME.
- (xlv) — There is a  $\mathcal{P}$ -TIME reduction of the halting problem to 3-SAT.

- (xlvi) \_\_\_\_\_ Every context-free language is in  $\mathcal{P}$ .
- (xlvii) \_\_\_\_\_ Every context-free language is in  $\mathcal{NC}$ .
- (xlviii) \_\_\_\_\_ Addition of binary numerals is in  $\mathcal{NC}$ .
- (xlix) \_\_\_\_\_ Every context-sensitive language is in  $\mathcal{P}$ .
  - (l) \_\_\_\_\_ Every language generated by a general grammar is recursive.
  - (li) \_\_\_\_\_ The problem of whether two given context-free grammars generate the same language is decidable.
  - (lii) \_\_\_\_\_ If  $G$  is a context-free grammar, the question of whether  $L(G) = \Sigma^*$  is decidable, where  $\Sigma$  is the terminal alphabet of  $G$ .
  - (liii) \_\_\_\_\_ The language of all fractions (using base 10 numeration) whose values are less than  $\pi$  is decidable. (A *fraction* is a string. “314/100” is in the language, but “22/7” is not.)
  - (liv) \_\_\_\_\_ There exists a polynomial time algorithm which finds the factors of any positive integer, where the input is given as a unary (“caveman”) numeral.
  - (lv) \_\_\_\_\_ For any two languages  $L_1$  and  $L_2$ , if  $L_1$  is undecidable and there is a recursive reduction of  $L_1$  to  $L_2$ , then  $L_2$  must be undecidable.
  - (lvi) \_\_\_\_\_ For any two languages  $L_1$  and  $L_2$ , if  $L_2$  is undecidable and there is a recursive reduction of  $L_1$  to  $L_2$ , then  $L_1$  must be undecidable.
  - (lvii) \_\_\_\_\_ If  $P$  is a mathematical proposition that can be written using a string of length  $n$ , and  $P$  has a proof, then  $P$  must have a proof whose length is  $O(2^{2^n})$ .
  - (lviii) \_\_\_\_\_ If  $L$  is any  $\mathcal{NP}$  language, there must be a  $\mathcal{P}$ -TIME reduction of  $L$  to the partition problem.
  - (lix) \_\_\_\_\_ Every bounded function is recursive.
  - (lx) \_\_\_\_\_ If  $L$  is  $\mathcal{NP}$  and also  $\text{co-}\mathcal{NP}$ , then  $L$  must be  $\mathcal{P}$ .
  - (lxi) \_\_\_\_\_ Recall that if  $\mathcal{L}$  is a class of languages,  $\text{co-}\mathcal{L}$  is defined to be the class of all languages that are not in  $\mathcal{L}$ . Let  $\mathcal{RE}$  be the class of all recursively enumerable languages. If  $L$  is in  $\mathcal{RE}$  and also  $L$  is in  $\text{co-}\mathcal{RE}$ , then  $L$  must be decidable.
  - (lxii) \_\_\_\_\_ Every language is enumerable.
  - (lxiii) \_\_\_\_\_ If a language  $L$  is undecidable, then there can be no machine that enumerates  $L$ .
  - (lxiv) \_\_\_\_\_ There exists a mathematical proposition that can be neither proved nor disproved.
  - (lxv) \_\_\_\_\_ There is a non-recursive function which grows faster than any recursive function.
  - (lxvi) \_\_\_\_\_ There exists a machine that runs forever and outputs the string of decimal digits of  $\pi$  (the well-known ratio of the circumference of a circle to its diameter).

- (lxvii) ——— For every real number  $x$ , there exists a machine that runs forever and outputs the string of decimal digits of  $x$ .
- (lxviii) ——— **Rush Hour**, the puzzle sold in game stores everywhere, generalized to a board of arbitrary size, is  $\mathcal{NP}$ -complete.
- (lxix) ——— There is a polynomial time algorithm which determines whether any two regular expressions are equivalent.
- (lxx) ——— If two regular expressions are equivalent, there is a polynomial time proof that they are equivalent.
- (lxxi) ——— Every subset of a regular language is regular.
- (lxxii) ———  $\mathcal{P} = \mathcal{NP}$
- (lxxiii) ———  $\mathcal{P} = \mathcal{NC}$
- (lxxiv) ——— Let  $L$  be the language over  $\{a, b, c\}$  consisting of all strings which have more  $a$ 's than  $b$ 's and more  $b$ 's than  $c$ 's. There is some PDA that accepts  $L$ .
- (lxxv) ——— Every subset of any enumerable set is enumerable.
- (lxxvi) ——— If  $L$  is a context-free language which contains the empty string, then  $L \setminus \{\lambda\}$  must be context-free.
- (lxxvii) ——— If  $L$  is any language, there is a reduction of  $L$  to the halting problem. (Warning: this is a trick question. Give it some serious thought.)
- (lxxviii) ——— The computer language C++ has Turing power.
- (lxxix) ——— Let  $\Sigma$  be the binary alphabet. Every  $w \in \Sigma^*$  which starts with 1 is a binary numeral for a positive integer. Let  $Sq : \Sigma^* \rightarrow \Sigma^*$  be a function which maps the binary numeral for any integer  $n$  to the binary numeral for  $n^2$ . Then  $Sq$  is an  $\mathcal{NC}$  function.
- (lxxx) ——— If  $L$  is any  $\mathcal{P}$ -TIME language, there is an  $\mathcal{NC}$  reduction of the Boolean circuit problem to  $L$ .
- (lxxxii) ——— If an abstract Pascal machine can perform a computation in polynomial time, there must be some Turing machine that can perform the same computation in polynomial time.
- (lxxxiii) ——— The binary integer factorization problem is  $\text{co-}\mathcal{NP}$ .
- (lxxxiii) ——— Let  $L$  be any  $\mathcal{RE}$  language which is not decidable, and let  $M_L$  be a machine which accepts  $L$ .
- (a) If there are no strings of  $L$  of length  $n$ , let  $T(n) = 0$ .
- (b) Otherwise, let  $T(n)$  be the largest number of steps it takes  $M_L$  to accept any string in  $L$  of length  $n$ .
- Then  $T$  is a recursive function.
- (lxxxiv) ——— There is a polynomial time reduction of the subset sum problem to the binary factorization problem.

- (lxxxv) ----- The language of all palindromes over  $\{a, b\}$  is an LR language.
- (lxxxvi) ----- The Simplex algorithm for linear programming is polynomial time.
- (lxxxvii) ----- Remember what a *fraction* is? It's a string consisting of a decimal numeral, followed by a slash, followed by another decimal numeral whose value is not zero. For example, the string "14/37" is a fraction. Each fraction has a value, which is a number. For example, "2/4" and "1/2" are different fractions, but has the same value. For any real number  $x$ , the set of fractions whose values are less than  $x$  is  $\mathcal{RE}$ .
- (lxxxviii) ----- The union of any two deterministic context-free languages must be a DCFL.
- (lxxxix) ----- The intersection of any two deterministic context-free languages must be a DCFL.
- (xc) ----- The complement of any DCFL must be a DCFL.
- (xci) ----- Every DCFL is generated by an LR grammar.
- (xcii) ----- The membership problem for a DCFL is in the class  $\mathcal{P}$ -TIME.
- (xciii) ----- If  $h : \Sigma_1 \rightarrow \Sigma_2^*$  is a function,  $L_1 \in \Sigma_1^*$ ,  $L_2 \subseteq \Sigma_2^*$ ,  $h(L_1) = L_2$  and  $L_1$  is regular, then  $L_2$  must be regular.
- (xciv) ----- If  $h : \Sigma_1 \rightarrow \Sigma_2^*$  is a function,  $L_1 \in \Sigma_1^*$ ,  $L_2 \subseteq \Sigma_2^*$ ,  $h(L_1) = L_2$  and  $L_2$  is regular, then  $L_1$  must be regular.
- (xcv) ----- If  $h : \Sigma_1 \rightarrow \Sigma_2^*$  is a function,  $L_1 \in \Sigma_1^*$ ,  $L_2 \subseteq \Sigma_2^*$ ,  $L_1 = h^{-1}(L_2)$  and  $L_2$  is regular, then  $L_1$  must be regular.
2. (10 points each) For each language or problem listed below, fill in the blank with a letter from A to G, where each letter has the following meaning:
- A:** Known to be  $\mathcal{NC}$ .
- B:** Known to be  $\mathcal{P}$ -TIME but not known to be  $\mathcal{NC}$ .
- C:** Known to be  $\mathcal{NP}$ , but not known to be  $\mathcal{P}$ -TIME, and not known to be  $\mathcal{NP}$ -complete.
- D:** Known to be  $\mathcal{NP}$ -complete.
- E:** Known to be  $\mathcal{P}$ -SPACE, but not known to be  $\mathcal{NP}$ .
- F:** Known to be decidable, but not known to be  $\mathcal{P}$ -SPACE
- G:** Undecidable.
- (i) \_\_\_\_\_ The Dyck language.
- (ii) \_\_\_\_\_ The Boolean Circuit problem.
- (iii) \_\_\_\_\_ Equivalence of NFAs.
- (iv) \_\_\_\_\_ Block Sorting.
- (v) \_\_\_\_\_ The language  $\{a^n b^n c^n : n > 0\}$ .
- (vi) \_\_\_\_\_ Factoring integers expressed as decimal numerals.

- (vii) \_\_\_\_\_ Multiplication of binary numerals.
- (viii) \_\_\_\_\_ All checkers positions where Black can force a win.
3. (10 points each) For each language or problem listed below, fill in the blank with a letter from H to L, where each letter has the following meaning:  
**H:** Decidable.  
**I:**  $\mathcal{RE}$  but not decidable.  
**K:** co- $\mathcal{RE}$  but not decidable.  
**L:** Neither  $\mathcal{RE}$  nor co- $\mathcal{RE}$ .
- (i) \_\_\_\_\_ The halting problem.
- (ii) \_\_\_\_\_ The diagonal language.
- (iii) \_\_\_\_\_ The complement of the diagonal language.
- (iv) \_\_\_\_\_ The subset sum problem.
- (v) \_\_\_\_\_ Equivalence of context-free grammars.
- (vi) \_\_\_\_\_ Rush Hour (the sliding block puzzle).
4. [20 points] Design an LALR parser for the following context-free grammar where  $S$  is the start symbol and the alphabet of terminals is  $\{a, b\}$ . I have filled in a few entries.

1.  $S \rightarrow a_2 S_3 b_4 S_5$

2.  $S \rightarrow \lambda$

	$a$	$b$	$\$$	$S$
0	$s_2$			
1			HALT	
2		$r_2$		3
3		$s_4$		
4				
5			$r_1$	

5. [20 points] Give a  $\mathcal{P}$ -TIME reduction of the subset sum problem to the partition problem.

6. [20 points] State the pumping lemma for context-free languages.

7. [20 points] Suppose there is a machine that enumerates a language in canonical order. Prove that  $L$  is decidable.

8. [20 points]

Let  $L$  be the language generated by the Chomsky Normal Form (CNF) grammar given below.

$$S \rightarrow IS$$

$$S \rightarrow XY$$

$$S \rightarrow WS$$

$$S \rightarrow a$$

$$X \rightarrow IS$$

$$Y \rightarrow ES$$

$$W \rightarrow w$$

$$I \rightarrow i$$

$$E \rightarrow e$$

Use the CYK algorithm to prove that the string  $iwiaea$  is a member of  $L$ . Use the figure below for your work.
