

University of Nevada, Las Vegas Computer Science 456/656 Fall 2024

Assignment 2: Due Tuesday January 30, 2023, 11:59 PM

Name: \_\_\_\_\_

You are permitted to work in groups, get help from others, read books, and use the internet. You will receive a message from the graduate assistant, Zachary Edwards, telling you how to turn in the assignment.

1. Identify which machine accepts the language defined by each regular expression.

- (a)  $a^* + b^*$   $M_7$
- (b)  $\lambda$   $M_2$
- (c)  $a^*$   $M_3$
- (d)  $\emptyset$   $M_1$
- (e)  $a(aa + b)^*$   $M_8$
- (f)  $a^*b^*$   $M_6$
- (g)  $(a + b)^*$   $M_4$
- (h)  $(ab)^*$   $M_5$

2. True or False.

- (a) **T** If  $L$  is any language,  $L + L = L$
- (b) **T** If  $L$  is any language,  $L \cap L = L$
- (c) **T** If  $L$  is any language,  $\lambda \in L^*$ .

3. Let  $L_1 = \{a, ab\}$  and  $L_2 = \{a, ba\}$ . How many strings are there in the language  $L_1L_2$ ? 3  
 How many strings are there in the language  $L_2L_1$ ? 4

4. True or False. These are harder.

(a) **T** Any language consisting of all decimal numerals of an arithmetic sequence (for example:  $\{5 + 8n : n \geq 0\} = \{5, 13, 21, 29, 37, 45, \dots\}$ ) is regular.

(b) **T** Let  $L$  be a regular binary language. Let  $L'$  be the language of all strings obtained from members of  $L$  by substituting  $ab$  for 0 and  $c$  for 1. Then  $L'$  must be regular. For example, if  $L = \{0, 10, 10011\}$  then  $L' = \{ab, cab, cababcc\}$ .

5. Any NFA with  $n$  states is equivalent to some DFA with at most  $2^n$  states, counting the dead state. Draw a DFA equivalent to the following three state NFA. For just this problem, include the dead state in your figure.

**Show your work.**

	a	b	c
0	01	0	1
1	2	2	2
2	$\emptyset$	$\emptyset$	$\emptyset$
01	012	02	12
02	01	0	1
12	2	2	2
012	012	02	12
