1. True or False. Write “O” if the answer is not known to science at this time. [5 points each]
   (a) ______ Computers are so fast today that complexity theory is only of theoretical, but not practical, interest.
   (b) ______ The inverse Ackermann function, $\alpha(n)$, grows so slowly that, from a practical (as opposed to theoretical) point of view, it might as well be constant.
   (c) ______ If a problem is $NP$-complete, there is no polynomial time algorithm which solves it.
   (d) ______ Quicksort takes $\Theta(n \log n)$ time on an array of size $n$.
   (e) ______ Planar graphs are sparse.
   (f) ______ Acyclic graphs are sparse.
   (g) ______ Acyclic directed graphs are sparse.

2. Fill in the blanks. [5 points each blank.]
   (a) If a planar graph $G$ has 20 vertices, then the number of vertices of $G$ cannot be less than ___________.
      (You must give the best possible answer, exactly. No partial credit.)
   (b) A directed acyclic graph with 5 vertices cannot have more than 10 arcs, and a directed acyclic graph with 6 vertices cannot have more than 15 arcs. A directed acyclic graph with 10 vertices cannot have more than __________ arcs. (You must give the best possible answer, exactly. No partial credit.)
   (c) A directed acyclic graph with 20 arcs cannot have few than __________ vertices.
   (d) The height of a binary tree with 50 nodes is at least __________. (You must give the best possible answer, exactly. No partial credit.)
   (e) In ________________ hashing, there are no collisions.
   (f) If separate chaining is used to resolve collisions in a hash table with $n$ items and $n$ places in the array and if the hash function is pseudo-random, then approximately __________% of the places will have more than two items. Pick the best answer from among these choices: $(0\%, 1\%, 2\%, 4\%, 8\%, 16\%, 32\%)$
   (g) The time complexity of every comparison-based sorting algorithm is __________. (Your answer should use $\Omega$ notation.)
   (h) __________________________ sorting is not comparison-based.
(i) The infix expression \((x + y) \times z\) is equivalent to the prefix expression ___________________________ and the postfix expression __________________________.

(j) What is the only difference between the abstract data types queue and stack?

(j) The only difference between the abstract data types queue and stack is __________________________.

(k) The items stored in a priority queue (that includes stacks, queues, and heaps) represent __________________________.

(l) Name a divide-and-conquer searching algorithm.

(l) __________________________

(m) Name two divide-and-conquer sorting algorithms.

(m) __________________________

(n) The following is pseudo-code for which sorting algorithm we’ve discussed?

(n) int x[n];
obtain values of x;
for(int i = n-1; i > 0; i--)
    Find the largest element of x[0], ... x[i] and swap it with x[i]

(o) The following is pseudo-code for which sorting algorithm we’ve discussed?

(o) int x[n];
obtain values of x;
bool finished = false;
for(int i = n-1; i > 0 and not finished; i--)
{
    finished = true;
    for(int j = 0; j < i; j++)
    {
        if(x[j] > x[j+1])
        {
            swap(x[j],x[j+1]);
            finished = false;
        }
    }
}

3. Give the asymptotic complexity, in terms of \(n\), of each of the following code fragments. [10 points each]

(a) for(int i = n; i > 1; i = i/2)
    cout << "hello world" << endl;
(b) for(int i = 1; i < n; i++)
    for(int j = 1; j < i; j = 2*j)
        cout << "hello world" << endl;

(c) for(int i = 1; i < n; i++)
    for(int j = i; j < n; j = 2*j)
        cout << "hello world" << endl;

(d) for(int i = 2; i < n; i = i*i)
    cout << "hello world" << endl;

4. [30 points] Name two problems which are known to be \(\mathcal{NP}\)-complete, and one problem that is known to be undecidable.

5. Solve the recurrences. Give asymptotic answers in terms of \(n\), using either \(O\), \(\Omega\), or \(\Theta\), whichever is most appropriate.

(a) [10 points] \(F(n) = 2F\left(\frac{n}{2}\right) + n\)

(b) [10 points] \(F(n) \geq 4F\left(\frac{n}{2}\right) + n^2\)

(c) [10 points] \(F(n) = F(n-1) + \frac{n}{4}\)

(d) [10 points] \(F(n) \leq F\left(\frac{n}{2}\right) + F\left(\frac{n}{4}\right) + F\left(\frac{n}{8}\right) + n\)

(e) [10 points] \(F(n) = F(n - \sqrt{n}) + n\)

(f) [10 points] \(F(n) = F(\log n) + 1\)

6. [30 points] Use dynamic programming to compute the Levenstein distance between the strings “011011001”
and “1010011001.” (Just in case you forgot: the Levenstein distance between two strings is the number of elementary operations needed to change one string to the other, where the elementary operations are insertion, deletion, and replacement.)

7. Solve each of the following recurrences, giving the answer in terms of $O$, $\Theta$, or $\Omega$, whichever is most appropriate [10 points each].

(a) $T(n) < T(n - 2) + n^2$

(b) $F(n) \geq F(\sqrt{n}) + \lg n$

(c) $G(n) \geq G(n - 1) + n$

(d) $F(n) = 4F(n/2) + n^2$

(e) $H(n) \leq 2H(\sqrt{n}) + O(\log n)$

(f) $K(n) = K(n - \sqrt{n}) + 1$

(g) $F(n) = 4F(\frac{3n}{4}) + n^5$ (No, you don’t need a calculator.)

8. Find the asymptotic complexity, in terms of $n$, for each of these fragments, expressing the answers using $O$, $\Theta$, or $\Omega$, whichever is most appropriate.

(a) for(i = 0; i < n; i = i+1);
    cout << "Hi!" << endl;

(b) for(i = 1; i < n; i = 2*i);
    cout << "Hi!" << endl;

(c) for(i = 2; i < n; i = i*i);
    cout << "Hi!" << endl;

(d) The following code models the first phase of heapsort.
    for(int i = n; i > 0; i--)
        for(int j = i; 2*j <= n; j = 2*j)
cout << "swap" << endl;

(e) The following code models the second phase of heapsort.

```cpp
for(int i = n; i > 0; i--)
{
    cout << "swap" << endl;
    for(int j = 1; 2*j <= i; j = 2*j)
        cout << "swap" << endl;
}
```

(f) The following code models insertion of \( n \) items into an AVL tree.

```cpp
for(int i = 1; i < n; i++)
    for(int j = n; j > 0; j = j/2)
        cout << "check AVL property and possibly rotate" << endl;
```

9. Solve each of the following recurrences, expressing the answers using \( O \), \( \Theta \), or \( \Omega \), whichever is most appropriate. [10 points each]

(a) \( F(n) = F(n/2) + 1 \)

(b) \( F(n) = F(n - 1) + O(\log n) \)

(c) \( F(n) = F\left(\frac{n}{2}\right) + 2F\left(\frac{n}{4}\right) + n \)

(d) \( F(n) = F\left(\frac{3n}{5}\right) + F\left(\frac{4n}{5}\right) + n^2 \)

Use the same method you used for the previous problem. Hint: \( 3^2 + 4^2 = 5^2 \).

(e) \( F(n) = F(n - 2) + n \)

10. (a) Use Huffman’s algorithm to construct an optimal prefix code for the alphabet \( \{A, B, C, D, E, F\} \)
    where the frequencies of the symbols are given by the following table.

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Frequency</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>2</td>
</tr>
<tr>
<td>B</td>
<td>8</td>
</tr>
<tr>
<td>C</td>
<td>9</td>
</tr>
<tr>
<td>D</td>
<td>3</td>
</tr>
<tr>
<td>E</td>
<td>7</td>
</tr>
<tr>
<td>F</td>
<td>5</td>
</tr>
</tbody>
</table>
(b) Use the Hu-Tucker algorithm to find an optimal alphabetic prefix-free code on those same letters using the same distribution.

11. [10 points]
Write pseudo-code for binary search.

12. Find the asymptotic complexity, in terms of $n$, for each of these fragments, expressing the answers using $O$, $\Theta$, or $\Omega$, whichever is most appropriate. [10 points each]

(a) 
```c++
for(int i = 1; i*i < n; i++)
    cout << "Hi!" << endl;
```

(b) 
```c++
for(int i = n; i > 1; i = sqrt(i))
    cout << "Hi!" << endl;
```

Find the asymptotic time complexity, in terms of $n$, for each of these code fragments, expressing the answers using $O$, $\Theta$, or $\Omega$, whichever is most appropriate. [10 points each]

(a) `int f(int n)`
```c++
{
    if (n < 2) return 1;
    else return f(n-1)+f(n-1);
}
```

(b) `void hello(int n)`
```c++
{
    if(n >= 1)
    {
        for(int i = 1; i < n; i++)
            cout << "Hello!" << endl;
        hello(n/2);
        hello(n/2);
    }
}
13. [20 points] Define the Collatz function as follows:

```c
int collatz(int n)
{
    assert(n > 0);
    if(n == 1) return 0;
    else if (n%2) return collatz(3*n+1); // n is odd, greater than 1
    else return collatz(n/2); // n is even
}
```

Write pseudo-code for a memoization algorithm which prints `collatz(n)` for all `n` from 1 to 1000.

14. [20 points] Give pseudocode for a recursive algorithm which computes the median of the union of two sorted lists in logarithmic time.

15. [20 points] Describe a randomized algorithm which finds the \( k \)th smallest element of an unsorted list of \( n \) distinct numbers, for a given \( k \leq n \), in \( O(n) \) expected time. (By “distinct,” I mean that no two numbers in the list are equal.)
16. [20 points] Walk through the $A^*$ algorithm for the following weighted graph to find the shortest path from S to T. Edge weights are shown in black, and the values of the heuristic are shown in red.

![Graph Image]

17. [20 points] Walk through Kosaraju’s algorithm to find the strong components of the directed graph.

![Directed Graph Image]
